A female computer expert at the world's largest bank plans the perfect heist in this New York Times Notable Book from the #1 international bestselling author of *The Eight*. Verity Banks is one of the most powerful women in finance, but she still reports to a man. Her boss not only refuses to implement her security plan to safeguard customers' deposits, he also sabotages her shot at becoming director of security at the Federal Reserve. Outraged, Verity decides to take revenge by hitting her boss where it will hurt the most: right in his company's balance sheet. She is about to begin her assault when she hears from the last person she ever expected to see again, Zoltan Tor. A brilliant computer scientist who taught Verity everything she knows, Zoltan will help her if she agrees to an outlandish wager: Which of them can steal \$1 billion, invest it to make \$30 million in three months, and return it before anyone notices? Verity can use a computer; Zoltan will do it the old-fashioned way. To beat Zoltan at his own game, Verity will risk her fortune, her professional reputation, and her life.
